Note: 10 miles per hour = 16.1 kilometers per hour. "Y" indicates that the characteristic is present, and "N" indicates that the characteristic is not present.

- 1) Nearly all hot spot corridors had consistent roadway characteristics along the full length of the 1000m corridor. Fewer than 10 had notable changes (e.g., different number of lanes in part of the corridor). In these cases, we recorded the characteristics present for the greatest length within the corridor.
- 2) Cluster type codes are: RH = "Rural Highway", UA = "Urban Principal Arterial Roadway", and NY = "New York City Thoroughfare".
- 3) Number of lanes includes continuous lanes such as two-way left-turn lanes, but it does not include left- or right-turn pockets. Bike lanes and parking lanes are also not counted.
- 4) "Y" indicates that there are complete sidewalks on both sides of the roadway. "N" indicates that there are sidewalk gaps on one or both sides of the roadway.
- 5) Driveway crossing categories are based on the number of driveways on both sides of the 1000m corridor: 3 = Frequent (>20 driveways), 2 = Moderate (10-20 driveways), 1 = Few (<10 driveways).
- 6) The two corridors in Bayonet Point, FL overlap by approximately 15% and share one fatal pedestrian crash during 2009-2016.
- 7) The hot spot corridor is a one-way street.
