The Journal of Transport and Land Use: Guidelines for Authors

2024 Revision

These guidelines are provided to help authors prepare their manuscript for submission and publication in the Journal of Transport and Land Use. Careful preparation of the manuscript will avoid many potential problems and delays in the publication process and help ensure that work is presented accurately and effectively.

1 Preparing your manuscript

1.1 Style guides
The Publication Manual of the American Psychological Association (APA), 7th edition, is the standard editorial reference for the Journal; it contains comprehensive guidelines on style and grammar. Another resource for APA style, available for no cost, is the Purdue University Online Writing Lab.

1.2 Software and file formats
Accepted manuscripts provided for typesetting must be submitted using the MS Word Template provided on the JTLU submissions page. The body copy in the template is Times New Roman and the headings are Calibri. Styles can be viewed in the template’s style pane, pictured at right.

1.3 Metric units of measurement
Provide all measurements in metric (SI) units. Imperial (English) or other local units may be used in addition to metric units, given in parentheses after the metric units.

1.4 Author information
Include the names and affiliations (academic or professional) of all authors at the beginning of the article. If one or more authors are to be designated as corresponding authors, note this in the manuscript and provide contact information (email addresses are preferred). Submitters are encouraged to provide email addresses for all authors.

1.5 Article abstract
Articles must be accompanied by a text abstract of no more than 200 words, which will appear at the beginning of the text.

1.6 Equations
Number equations sequentially: (1), (2), (3) . . . When referring to numbered equations in the main (body) text, include the full word “equation” (e.g., “Equation 3,” not “Eq. 3”).
JTLU: Guidelines for Authors

Do not provide equations as graphic files or images. Rather, use the equation tool in Microsoft Word. Consult the Journal copyeditor if you have difficulty with this requirement. For additional help with inserting equations please see Microsoft equation support.

1.7 Footnotes
Footnotes must be very brief. If you need to provide an explanation that requires more than a few lines, incorporate it into the main text. Do not include references in the footnotes. References should be listed in the reference section and cited in the main text. See section 3 for details.

2 Graphics and tables

2.1 Graphics/figures
Insert any graphics or figures used in the manuscript as high-resolution jpgs (minimum 200 dots per inch, or DPI). Place each figure within the manuscript’s text after its first callout, not at the end of the manuscript. Figure titles should appear below figures.

2.2 Using color
Differences across computer screens and printers can make color reproduction inconsistent. In addition, graphics that look good in color may become unintelligible when printed or viewed in grayscale; this is especially true of complex charts and maps that use a large number of colors. To ensure legibility, authors are encouraged to preview their graphics by viewing them in grayscale as well as color. The Journal, at the editors’ discretion, may convert color images to grayscale or black-and-white to improve legibility.

2.3 Tables
Authors are encouraged to develop tables using the styles supplied in the JTLU’s MS Word template. Tables must remain in vertical/portrait orientation (rather than horizontal/landscape) within the paper. Do not rotate the page to horizontal. Do not use section breaks and avoid cross referencing tables or figures within the document.

Place each table within the manuscript’s text after its first callout, not at the end of the manuscript. Table titles should appear above tables.

For more information on tables see Microsoft table support.

2.4 Captions
Provide all captions as separate text within the document; do not include captions within, or as part of, tables or other graphics. Illustrations, tables, and captions should be informative and descriptive. Tables and figures should be able to stand alone and be read independently of the text.

3 Citations and references

The Journal uses the author-date citation system and authors are listed alphabetically in the reference list. For a thorough description of author-date citations and the preparation of a reference list, consult the APA Publication Manual, 7th edition, chapters 9 and 10.
3.1 Citations in text
Use the parenthetical author-year format for all citations. Some basic examples of in-text citations:

- (Whitmeyer, 2000)
- (Heatherton, Fitzgilroy, and Hsu, 2008) [three or more authors, first citation in text] (Heatherton et al., 2008) [three or more authors, subsequent citations in text]
- (Jones, 1995, 2004a) [multiple publications by same author]
- (Heatherton, Fitzgilroy, and Hsu, 2008; Baker, 1999; Jones, 1995) [multiple references in one parentheses separated by semicolons]
- (Jones, 1995, 2004) [multiple publications by same author]
- (Deane, 2006, p. 65) [optional page number reference; no p. or pp. needed]
- (Environmental Protection Agency, 1966) [organization as author]
- “These methods were used successfully by Whitmeyer and Jones (2000)” [Citations of two or more authors incorporated directly into the text], but “These methods were used successfully by others (Whitmeyer & Jones, 2000) [parenthetical format uses “&” in place of “and”]

3.2 The reference list
Provide an alphabetical reference list of all works and resources cited in your article, following the author-date style.

When possible, provide URL or Digital Object Identifier (DOI) information for articles that are available online. Find DOI numbers with CrossRef’s guest query.

- **Journal articles**

- **Online articles and other resources**
  Note: Date of access and the phrase “Retrieved from” is not required.

- **Technical reports**

- **Books**

- **Chapters in books**

- **Conference papers**
4 Data availability
Data used in the articles should be available in a publicly accessible data archive. The Journal will allow small datasets to be included as appendices if they are not in a publicly accessible data archive. The objective is to enable research results to be reproduced by other researchers. If data cannot be publicly available, the author(s) should provide detailed information about each data source and the mechanism through which the data is obtained. In essence, author(s) are required to provide sufficient information so that people who are interested in using the same data and replicating the analysis know how and where to get the data after reading the paper.

5 Copyright notice
Authors who publish with JTLU agree to the following terms: 1) Authors retain copyright and grant the journal right of first publication with the work simultaneously licensed under Creative Commons Attribution-Noncommercial License 4.0 that allows others to share the work with an acknowledgement of the work's authorship and initial publication in this journal. 2) Authors can enter into separate, additional contractual arrangements for the non-exclusive distribution of the journal's published version of the work (e.g., post it to an institutional repository or publish it in a book), with an acknowledgement of its initial publication in this journal. 3) Authors are permitted and encouraged to post their work online (e.g., in institutional repositories or on their website) before and during the submission process, as it can lead to productive exchanges, as well as earlier and greater citation of published work.

6 Privacy statement
The names and email addresses entered in this journal site will be used exclusively for the stated purposes of this journal and will not be made available for any other purpose or to any other party.
